SAFETY GOGGLES

LEVEL

More than one person may be required to complete the assembly of this product.

To protect the finish, place all parts on a soft surface when unpacking.

When assembling ensure that all parts are firmly tightened.

Choose a location:

This water feature can either be wall mounted or used as a floor fountain. If you choose to use it as a floor fountain we recommend placing it against a wall.

This water feature is designed to be used indoors or outdoors. Do not place on a surface that may be damaged by water as splashing may occur.

Also consider the location of your power source. The pump and light cord reach 9' from the pump access door of the fountain body to the plugs, and should be connected to a grounded 110V outlet.

For best results as a floor fountain the water feature should be placed on a firm, level surface.

1

51056SS ASSEMBLY INSTRUCTIONS

Please carefully open on a soft surface to avoid damage.

Insert the light assembly (I) into the slot on back of fountain body (B).

2

Place roof (A) onto the fountain body (B) and secure with clips on back of fountain body (B).

Place the pump (G) into reservoir, feed the pump cord through the back of the fountain body (B).

Attach the pump (G) to the rubber hose.

3

51056SS ASSEMBLY INSTRUCTIONS

Place pump access door (C) into fountain body (B) to cover the entry.

For floor applications skip to step 7.

We recommend using this fountain against a wall if you want to use it as floor fountain.

Peel paper backing from the wall spacer pad (K) and apply to back of fountain body (B).

4

Because of the fountain's weight, we recommend attaching the mounting bracket to at least one stud.

Place mounting bracket (D) on wall in desired location, ensure it is level and mark holes. Drill 6 mm (1/4") pilot holes on marked spots and insert (3) anchors (M).

(If fastening to studs, skip this step.)

Secure mounting bracket (D) to wall with (3) supplied screws (L) and hang fountain assembly on mounting bracket (D).

5

51056SS ASSEMBLY INSTRUCTIONS

6

Optional, if not using cord covers skip to step 7.

Place cord channel (F) on wall and mark holes. Drill 6 mm (1/4") pilot holes on marked spots and insert (2) anchors (M). *(If fastening to studs, skip this step.)*

Attach cord channel (F) to wall with (2) supplied screws (L). Place cords inside cord channel (F) and press (2) cord covers (E) firmly on channel to secure.

FINAL STEPS

 Fill the fountain body (B) with 1.7 gallons of distilled water.

 Place decorative river stones (J) onto pump access door (C).

 Connect the light connectors (H) and (I) and screw the cap tightly.

 Plug light transformer (H) and pump (G) into outlets and turn light on at switch.

 Use water guiding pad (N) to brush the fountain face.

Note: Light does not have to be on to operate pump.

PUMP SAFETY & TROUBLESHOOTING

To clean the pump

Unplug the pump from the electrical outlet. Use a small soft brush or place it under a water stream to remove debris.

To keep water clean

Periodically change water to prevent algae buildup.

If the pump fails to run:

- This pump has an overheating protection feature that will turn off the pump when it becomes too hot while not covered with water. It may take a few minutes for the pump to cool down once it is submerged in water again. Note: the pump may cycle on and off as it cools and heats if not covered with water.
- Pump may be air locked, unplug and plug pump in several times to clear trapped air.
- Check circuit breaker, or try a different outlet.
- Check tubing for kinks and obstructions.
- Clean out any algae buildup.
- Remove the front cover & impeller cover to access the impeller area. Turn the rotor to ensure it is not broken or jammed.

With low flow rate, the pump will spew or “burp”:

- Check the water level to make sure the pump is completely submerged, water should always be above the min fill line (not all water features include min fill line).

51056SS ASSEMBLY INSTRUCTIONS

PUMP SAFETY & TROUBLESHOOTING cont.

If abnormal noise is heard during operation (with water):

- Disconnect the power supply and then remove the pump front cover and impeller cover.
- Use hand to grip the impeller, gently pull the impeller/rotor assembly out of the pump housing.
- Rinse the impeller/rotor assembly and the cavity with clean water. If breakage or surface damage is found in the assembly contact Customer Service for a part replacement.

WATER FEATURE WARNINGS & TROUBLESHOOTING

- Splashing may occur when the fountain is first turned on, protect surrounding surfaces as needed. Do not place the water feature on or near any surface that can be damaged by water.
- Distilled water is recommended to reduce mineral deposits, bacteria build up and algae that may damage the water feature basin and pump.
- To reduce the risk of electrical shock, always disconnect the power supply before working with the water feature.
- Keep small children and pets away from the water feature; they can fall into the water feature and drown.
- Once a week inspect water feature, floor and adjacent wall for moisture build-up and clean as necessary. This is especially important for humid environments.
- *This water feature is designed for outdoor use. It can be used indoors, however splashing may occur.*

51056SS ASSEMBLY INSTRUCTIONS

FREQUENTLY ASKED QUESTIONS

What should I consider when selecting a water feature?

In addition to your personal style tastes, be sure you have an area for your water feature that can be safely exposed to water, as splashing can occur. Also take into consideration what a water feature can add to your environment: the sound of flowing water or decorative lights.

Can my water feature be left outside over winter?

This water feature is rated for outdoor use; however certain weather conditions may adversely affect your water feature. If the temperature in your region is at risk of dropping below 33° F, your water feature should be “winterized” before the cold weather arrives. To winterize:

1. Fully drain your water feature of all water.
2. Disconnect the hoses, pumps, and lights.
3. Clean all components thoroughly, paying special attention to the pump to prevent residue build-up.
4. Allow all parts to dry.
5. Store parts and water feature in a safe, weather-free environment.

What kind of water should I use in my water feature?

The best water for your water feature is distilled water. This can help prevent and reduce bacteria and algae buildup. If you do not use distilled water, more maintenance will be necessary to keep the water feature clean.

How do I clean my water feature?

Oils, dirt, and algae can all build up on the water feature over time. The best way to restore your water feature to its original state is to empty all the water from the water feature and use a mild soap (like dish detergent) and an acrylic brush to clean all the parts.

FREQUENTLY ASKED QUESTIONS CONTINUED

How much water do I need to keep in the water feature?

Where possible in our water features, we have included fill lines to help you visualize the water level required for proper function. If your water feature does not include fill lines, please check the instruction manual for water capacity. The most important aspect to keeping your water feature functioning is to insure the pump is submerged in water at all times to prevent damage to the pump.

How often will I need to fill my water feature?

Over time, the water level in your water feature will recede. This is due to evaporation, and the speed at which your water feature will need to be filled depends greatly on your environment- the humidity, if your water feature is in the sun, how often you run the water feature, etc. We recommend checking the water level before running the water feature to insure the pump is submerged in water.

I cannot find my installation instructions. Where can I find another copy? Installation and assembly instructions can be found online at www.kenroyhome.com

Can lights be turned off separately from the water feature?

Water features that include lights will have a separate plug and switch for the lights. They do not have to be plugged in or turned on to run the water feature.

My pump is making a loud noise. How do I fix that?

1. Be sure the pump is fully submerged in water. If it is not, and pulling in air, it will make unwanted noise.
2. Check to make sure the pump is not touching the water feature anywhere other than the bottom. If it is up against the side wall or another part, the vibration from the pump can cause unwanted noise. If moving the pump away from other parts does not work, try placing a sponge or other soft material between these areas to pad the pump.

51056SS ASSEMBLY INSTRUCTIONS

FREQUENTLY ASKED QUESTIONS CONTINUED

How do I change my pump speed? Depending on the type of pump, you will need to either move the slider or turn the knob.

How do I clean my pump?

1. Disconnect the power supply and then remove pump cover/filter.
2. Gently pull impeller/rotor assembly out of the pump housing
3. Rinse the impeller/rotor assembly and the cavity with clean water.
4. If your pump comes with a sponge filter rinse this with clean water.
Algae buildup can be flushed out with a garden hose.

How do I level the water feature?

For the water to flow properly, it is critical the water feature is level. If your water feature will be placed in an area with uneven ground, use a level and leveling shims to help level the water feature. Shims are wedge-shaped plastic parts that can be placed between the water feature and the ground to create a level surface.

My tube is too long. What can be done to fix this?

The hose can be cut with a sharp blade or pair of scissors to the desired length.
