

## DIIMMER MODULE INSTALLATION INSTRUCTIONS

### Before Installing:

All installations should comply with National and local electrical codes.

If you have any doubts concerning installation contact a qualified, licensed electrician.

**NOTE:** Read all instructions thoroughly before starting installation.

The Kichler<sup>®</sup> on/off/dimmer module can be directly mounted to a Kichler LED KCL fixture OR simply in-line using a Kichler LED interconnect cable.

### NOTE:

- Only ONE dimmer switch can be used per run.
- The dimmer switch module can be connected between any fixtures or at either end of a connected run of fixtures.
- For use only with Kichler LED 24VDC Class 2, 5 AMP MAX Cabinet Lighting fixtures and accessories.

### DIRECTLY TO FIXTURES

- 1) Align connector on end of dimmer module with connector on end of existing fixture.
- 2) Push dimmer module to existing fixture until the fixture and the dimmer module are flush and connectors snap together.
- 3) Drive pre-installed screws into mounting surface until fixture is secure. If screws are difficult to install, remove screws, mark holes, and drill 1/16" pilot holes. (See Fig. 3)

**NOTE:** DO NOT OVER TIGHTEN SCREWS.

### IN-LINE USING INTERCONNECT CABLES

- 1) Determine location for dimmer module in run.
- 2) Select proper length interconnect cable P/N 12341 (9"), 12342 (14"), 12343 (21") or 12345 (10').
- 3) Drive pre-installed screws into mounting surface until fixture is secure. If screws are difficult to install, remove screws, mark holes, and drill 1/16" pilot holes.

**NOTE:** DO NOT OVER TIGHTEN SCREWS.

- 4) Hold interconnect cable to mounting surface and determine best path for cable. If interconnect cable is being run from cabinet to cabinet a notch such as a "V" could be cut in cabinet side panels to help keep cable out of sight.

**NOTE:** Interconnect cable is UL rated CL2. Installer should check with local building codes to determine if CL2 wire is allowed to run through floors, walls and ceilings. (See Fig. 4)

- 5) Peel backing off retaining clip(s) and affix to desired location(s). Surface should be as clean as possible. Drive pre-installed screw into the cabinet surface to secure the retaining clip to the surface. (See Fig. 5)
- 6) Slip Cable into clip(s) and snap closed.
